Introducing Bellybiotic in a Novel Probiotic Delivery System

BellyBiotic is a liquid probiotic in a novel delivery system used to provide digestive support in infants and children during antibiotic therapy.

Bellybiotic contains *Bacillus clausii*, in a Novel Probiotic Delivery system. *Bacillus clausii* is a trusted probiotic strain which has been used over 40 years around the world in the treatment of antibiotic associated diarrhea and to provide digestive support to infants, children and adults.

BellyBiotic contributes to the recovery of the intestinal microbial flora altered during the course of microbial disorders of diverse origin.

By producing various vitamins, particularly group B vitamins BellyBiotic contributes to the correction of vitamin disorders caused by antibiotics and chemo-therapeutic agents thus promoting normalization of intestinal flora.
